ADS http://adsabs.harvard.edu/abstract_service.html is a standard source of information about astronomy publications.

ISI <http://portal.isiknowledge.com/> contains publications and citations from the major refereed journals in all fields.

Effective number of papers computed as a sum where for each paper the points are given according to the author's order in the author list:

Solo author – 1.5 points, 1st –1 point, 2nd – 0.5, 3rd–0.3, 4th et al. –0.1.

Effective citations = (number of citations) * (effective number of papers)/ (number of refereed papers)

Normalized citations = Σ (citations for the paper / number of authors)

Top-five in each category are marked by blue.
